Forward-Looking Statements

This presentation includes expressed or implied forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended (the Exchange Act), about the Akari Therapeutics, Plc (the “Company”) that involve risks and uncertainties relating to future events and the future performance of the Company. Actual events or results may differ materially from these forward-looking statements. Words such as “will,” “could,” “would,” “should,” “expect,” “plan,” “anticipate,” “intend,” “believe,” “estimate,” “predict,” “project,” “potential,” “continue,” “future,” “opportunity” “will likely result,” “target,” variations of such words, and similar expressions or negatives of these words are intended to identify such forward-looking statements, although not all forward-looking statements contain these identifying words. Examples of such forward-looking statements include, but are not limited to, express or implied statements regarding: the business combination and related matters, including, but not limited to, post-closing operations and the outlook for the Company’s business; the Company’s targets, plans, objectives or goals for future operations, including those related to its product candidates; financial projections; future economic performance; and the assumptions underlying or relating to such statements. These statements are based on the Company’s current plans, estimates and projections. By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific. A number of important factors, including those described in this communication, could cause actual results to differ materially from those contemplated in any forward-looking statements. Factors that may affect future results and may cause these forward-looking statements to be inaccurate include, without limitation: the risk that the Company may not realize the anticipated benefits of its merger with Peak Bio, Inc. (the “Merger”) in the time frame expected, or at all; the ability to retain and hire key personnel; potential adverse reactions or changes to business relationships resulting from the Merger; the potential impact of unforeseen liabilities, future capital expenditures, revenues, costs, expenses, earnings, synergies, economic performance, indebtedness, financial condition and losses on the future prospects, business and management strategies for the management, expansion and growth of the combined business; uncertainties as to the long-term value of the Company’s American Depositary Shares (“ADSs”) (and the ordinary shares represented thereby), including the dilution caused by the Company’s issuance of additional ADSs (and the ordinary shares represented thereby) in connection with the Merger; risks related to global as well as local political and economic conditions, including interest rate and currency exchange rate fluctuations; potential delays or failures related to research and/or development of the Company’s programs or product candidates; risks related to any loss of the Company’s patents or other intellectual property rights; any interruptions of the supply chain for raw materials or manufacturing for the Company’s product candidates, the nature, timing, cost and possible success and therapeutic applications of product candidates being developed by the Company and/or its collaborators or licensees; the extent to which the results from the research and development programs conducted by the Company, and/or its collaborators or licensees may be replicated in other studies and/or lead to advancement of product candidates to clinical trials, therapeutic applications, or regulatory approval; uncertainty of the utilization, market acceptance, and commercial success of the Company’s product candidates; unexpected breaches or terminations with respect to the Company’s material contracts or arrangements; risks related to competition for the Company’s product candidates; the Company’s ability to successfully develop or commercialize its product candidates; potential exposure to legal proceedings and investigations; risks related to changes in governmental laws and related interpretation thereof, including on reimbursement, intellectual property protection and regulatory controls on testing, approval, manufacturing, development or commercialization of any of the Company’s product candidates; the Company’s ability to maintain listing of its ADSs on the Nasdaq Capital Market. While the foregoing list of factors presented here is considered representative, no list should be considered to be a complete statement of all potential risks and uncertainties. More detailed information about the Company and the risk factors that may affect the realization of forward-looking statements is set forth in the Company’s filings with the SEC, copies of which may be obtained from the SEC’s website at www.sec.gov. The Company assumes no, and hereby disclaims any, obligation to update the forward-looking statements contained in this press release.

WE ARE AKARI THERAPEUTICS

Akari Therapeutics is an innovative targeted oncology company built on next-generation ADCs and a novel discovery engine

Why Akari

Innovative Precision Antibody Drug Conjugates (ADCs) for the Treatment of Cancer

Discovery platform allows for generation of novel Bi-Functional ADC candidates with spliceosome inhibitor payload

Tunable Target, Linker and Payload

Lead Candidate **AKTX-101** (TROP2 PH1 ADC)

Significant advantages over current TROP2 ADCs observed in multiple preclinical models:

- Superior activity
- Prolonged survival
- Less resistance
- Better tolerability
- Prolonged survival in combination with checkpoint inhibitors (CPI)

Capital Efficient with Multiple Near-Term Milestones

- Lean team focused on Execution
- Opportunity for Non-Dilutive Capital Through Partnering of Legacy Pipeline
- BD Discussions ongoing with interested licensing/strategic partners

ADCs Have Revolutionized Cancer Therapy, But Have Some Shortcomings

All Currently Approved ADCs Utilize One of Only Two Payload Toxin Classes, Which Are Known for Toxicity and Resistance Issues

Tubulin Inhibitors | DNA Damaging Agents

Limited Combination Ability with Other Key Therapies Like Anti-PD1/Anti-PDL1

2023 Sales from Approved ADCs

	Product	Toxin Class	2023 Sales
Solid Tumors	 TRODELVY [®] sacituzumab govitecan-hzyl 980 mg for injection	DNA Damaging Agent	\$1.0B
	 ENHERTU [®] trastuzumab deruxtecan	DNA Damaging Agent	\$2.7B
	 tivdak [®] tisotumab vedotin-tftv for injection 40 mg	Microtubule Inhibitor	<\$100M
	 Kadcyla [®] ado-trastuzumab emtansine 28 mg/mL, INJECTION FOR ANTITUMOR USE	Microtubule Inhibitor	\$1.75B
	 PADCEV [®] enfortumab vedotin-ejfv injection for IV infusion 20 mg & 30 mg vials	Microtubule Inhibitor	\$1.3B
	 ELAHERE [®] erstatinib succinate gpr injection 80 mg	Microtubule Inhibitor	\$150M
Liquid Tumors	 POLIVY [®] polatuzumab vedotin-piq antitumor combination oral tablet, film-coated	Microtubule Inhibitor	\$750M
	 ADCETRIS [®] brentuximab vedotin 1 for injection	Microtubule Inhibitor	\$1.5B
	 Zynlonta [®] loncastumab tesimle-hyl for injection, for intravenous use - 10mg	DNA Damaging Agent	<\$100M
	 BESPONSA [®] molucizumab oozagimont-svna for injection	DNA Damaging Agent	\$140M
	 MYLOTARG [®] gemtuzumab ozogamicin for injection	DNA Damaging Agent	<\$100M

1. Antibody drug conjugates market. Market.us. (2023, November 3). <https://market.us/report/antibody-drug-conjugates-market/>

Bi-Functional ADC Platform Targeting Cancer

Highly Selective Cancer Cell Death Combined With Enhanced Immune System Engagement for Effective Tumor Eradication

Antibody

Targeting Clinically Validated TROP2 Receptor on Tumor Cells

Linker

Connects Anti-Tumor Payload to Targeting Antibody

Payload

Differentiated Novel PH1 Payload Disrupts Normal RNA Splicing, Leading to Cancer Cell Apoptosis

Potential to Overcome Shortcomings of Current ADCs

✓ Low Off-Target Toxicity

✓ Enhanced Activity as a Single Agent

✓ Potential to Overcome Tumor Resistance Mechanisms

✓ Ability to Induce Epitope Spreading

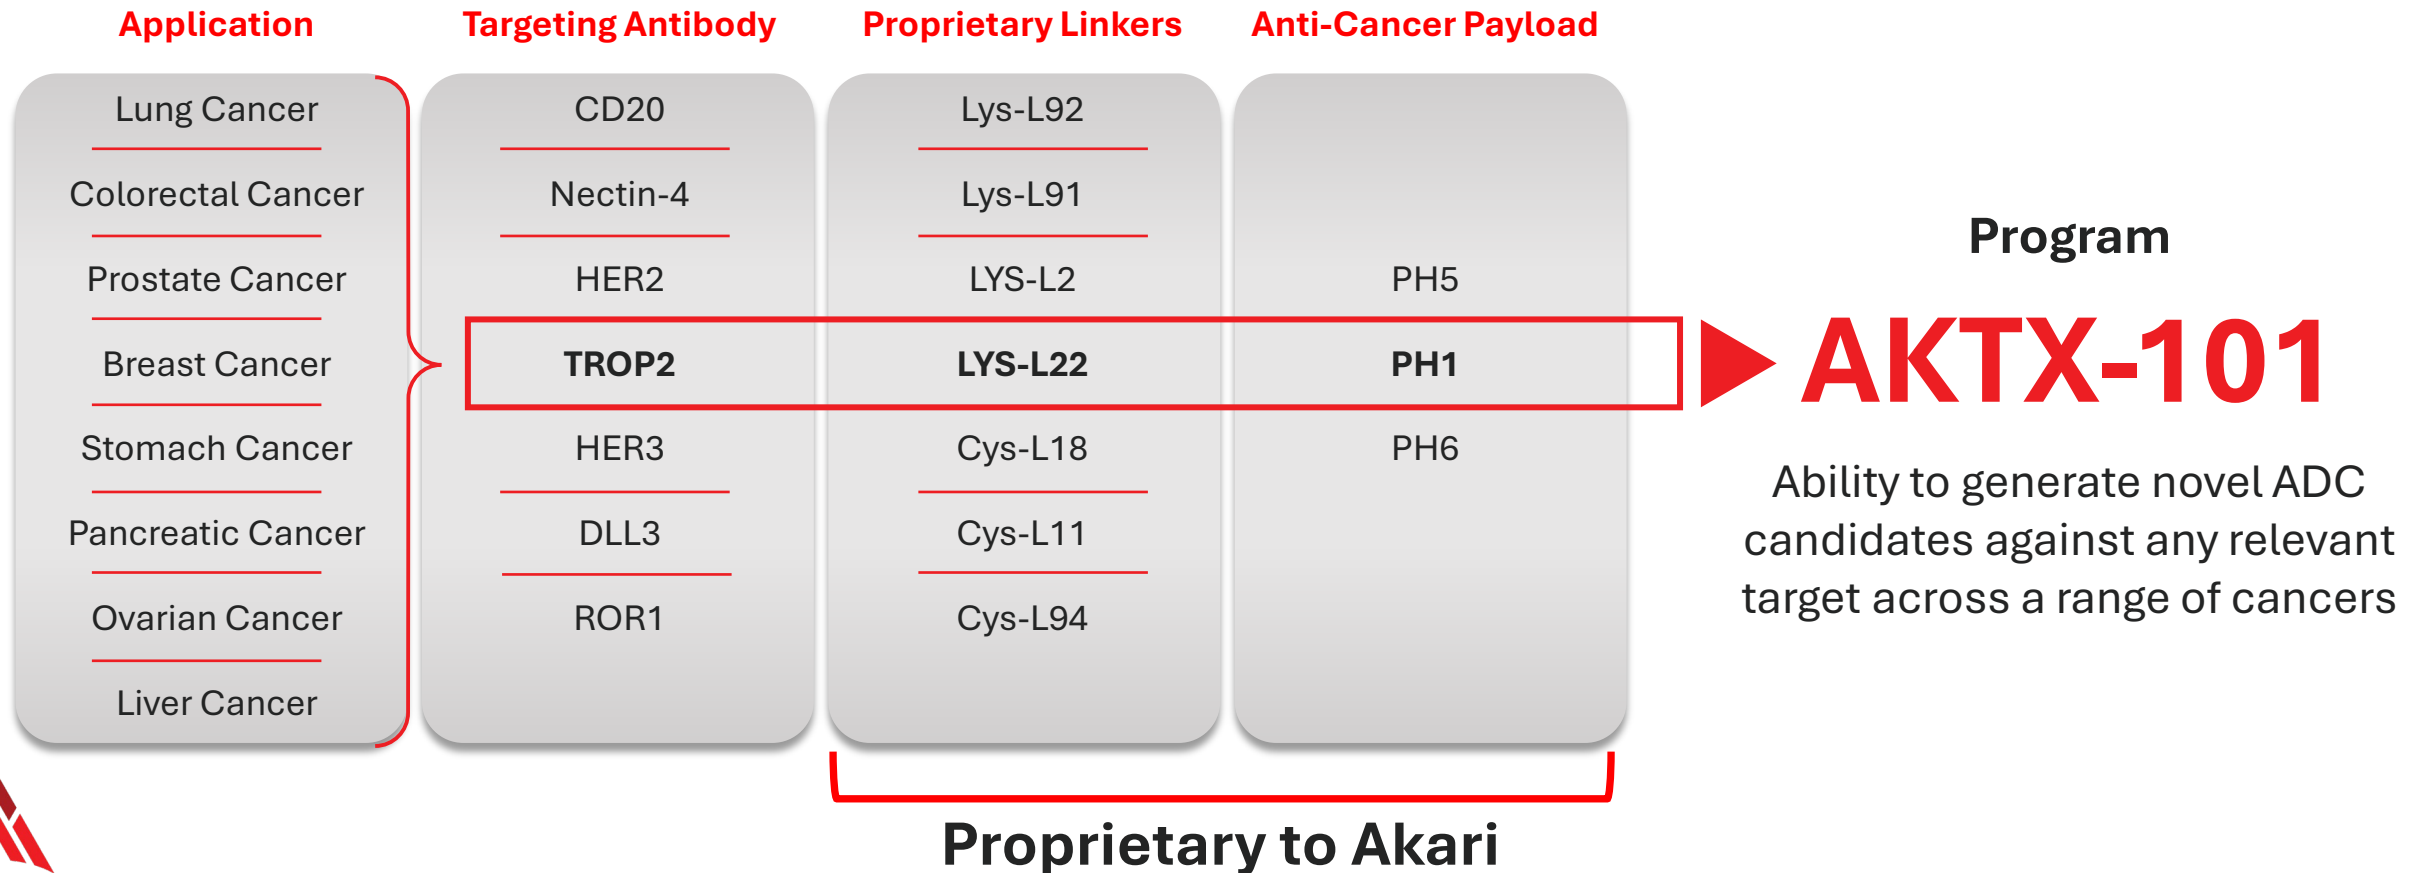

Next-Generation Precision ADC Pipeline

Program	Indication	Discovery	Preclinical	Clinical	Highlights
AKTX-101 (TROP2 PH1 ADC) <i>ADC with Novel Payload</i>	Solid Tumors				<ul style="list-style-type: none"> • Novel Payload: PH1 • Advancing IND-enabling preclinical studies • Pursue licensing / strategic partnership
AKTX-102 (Undisclosed Target) <i>ADC with Novel Payload</i>	Undisclosed				<ul style="list-style-type: none"> • Novel Payload: PH5 Payload targeting DNA Mismatch Repair (MMR) to generate neoepitopes
AKTX-103 (Undisclosed Target) <i>ADC with Novel Payload</i>	Undisclosed				<ul style="list-style-type: none"> • Novel Payload: PH6 Payload targeting DNA transcription in cancer cells and co-opted immune cells

Platform Technology to Fuel Pipeline with Ability to Generate Novel ADC Candidates Across a Range of Solid/Hematological Cancers

Akari Platform Technology Can Fuel a Pipeline

Ability to Precisely Tune Assets for Purpose Allows for Multiple Program Development for Additional Licensing Partnerships

Novel PH1 Payload: Superior Activity With Potent Effect Across Various Tumors Types and Targets Using Platform Technology

In Vitro Studies Performed at Lower PH1 Drug Dose (Lower DAR)

Trop2

Gastric Trop2^{High}

Bladder Trop2^{Heterogenous}

Pancreatic Trop2^{High}

Her2

Gastric Her2^{High}

Breast Her2^{Low}

Undisclosed

NSCLC Target^{Medium}

AKTX-101: Novel Payload is a Spliceosome Inhibitor

With Multiple Anti-Tumor Mechanisms

Novel Anti-Cancer Payload That Disrupts RNA Splicing Within Cancer Cells, Inducing Tumor-Specific Cell Death While Generating Immunostimulatory Effects and Minimizing Off-Target Toxicity

Potential to Overcome Shortcomings of Current ADCs

Immunostimulatory Effects

Accumulation of mis-spliced proteins generates neoantigens that can be recognized by the immune system, potentially enhancing anti-tumor immunity

Reduced Off-Target Toxicity

Proprietary linker and tumor selective antibodies that spare normal cells potentially reducing off-target toxicity

Overcomes Resistance Mechanisms

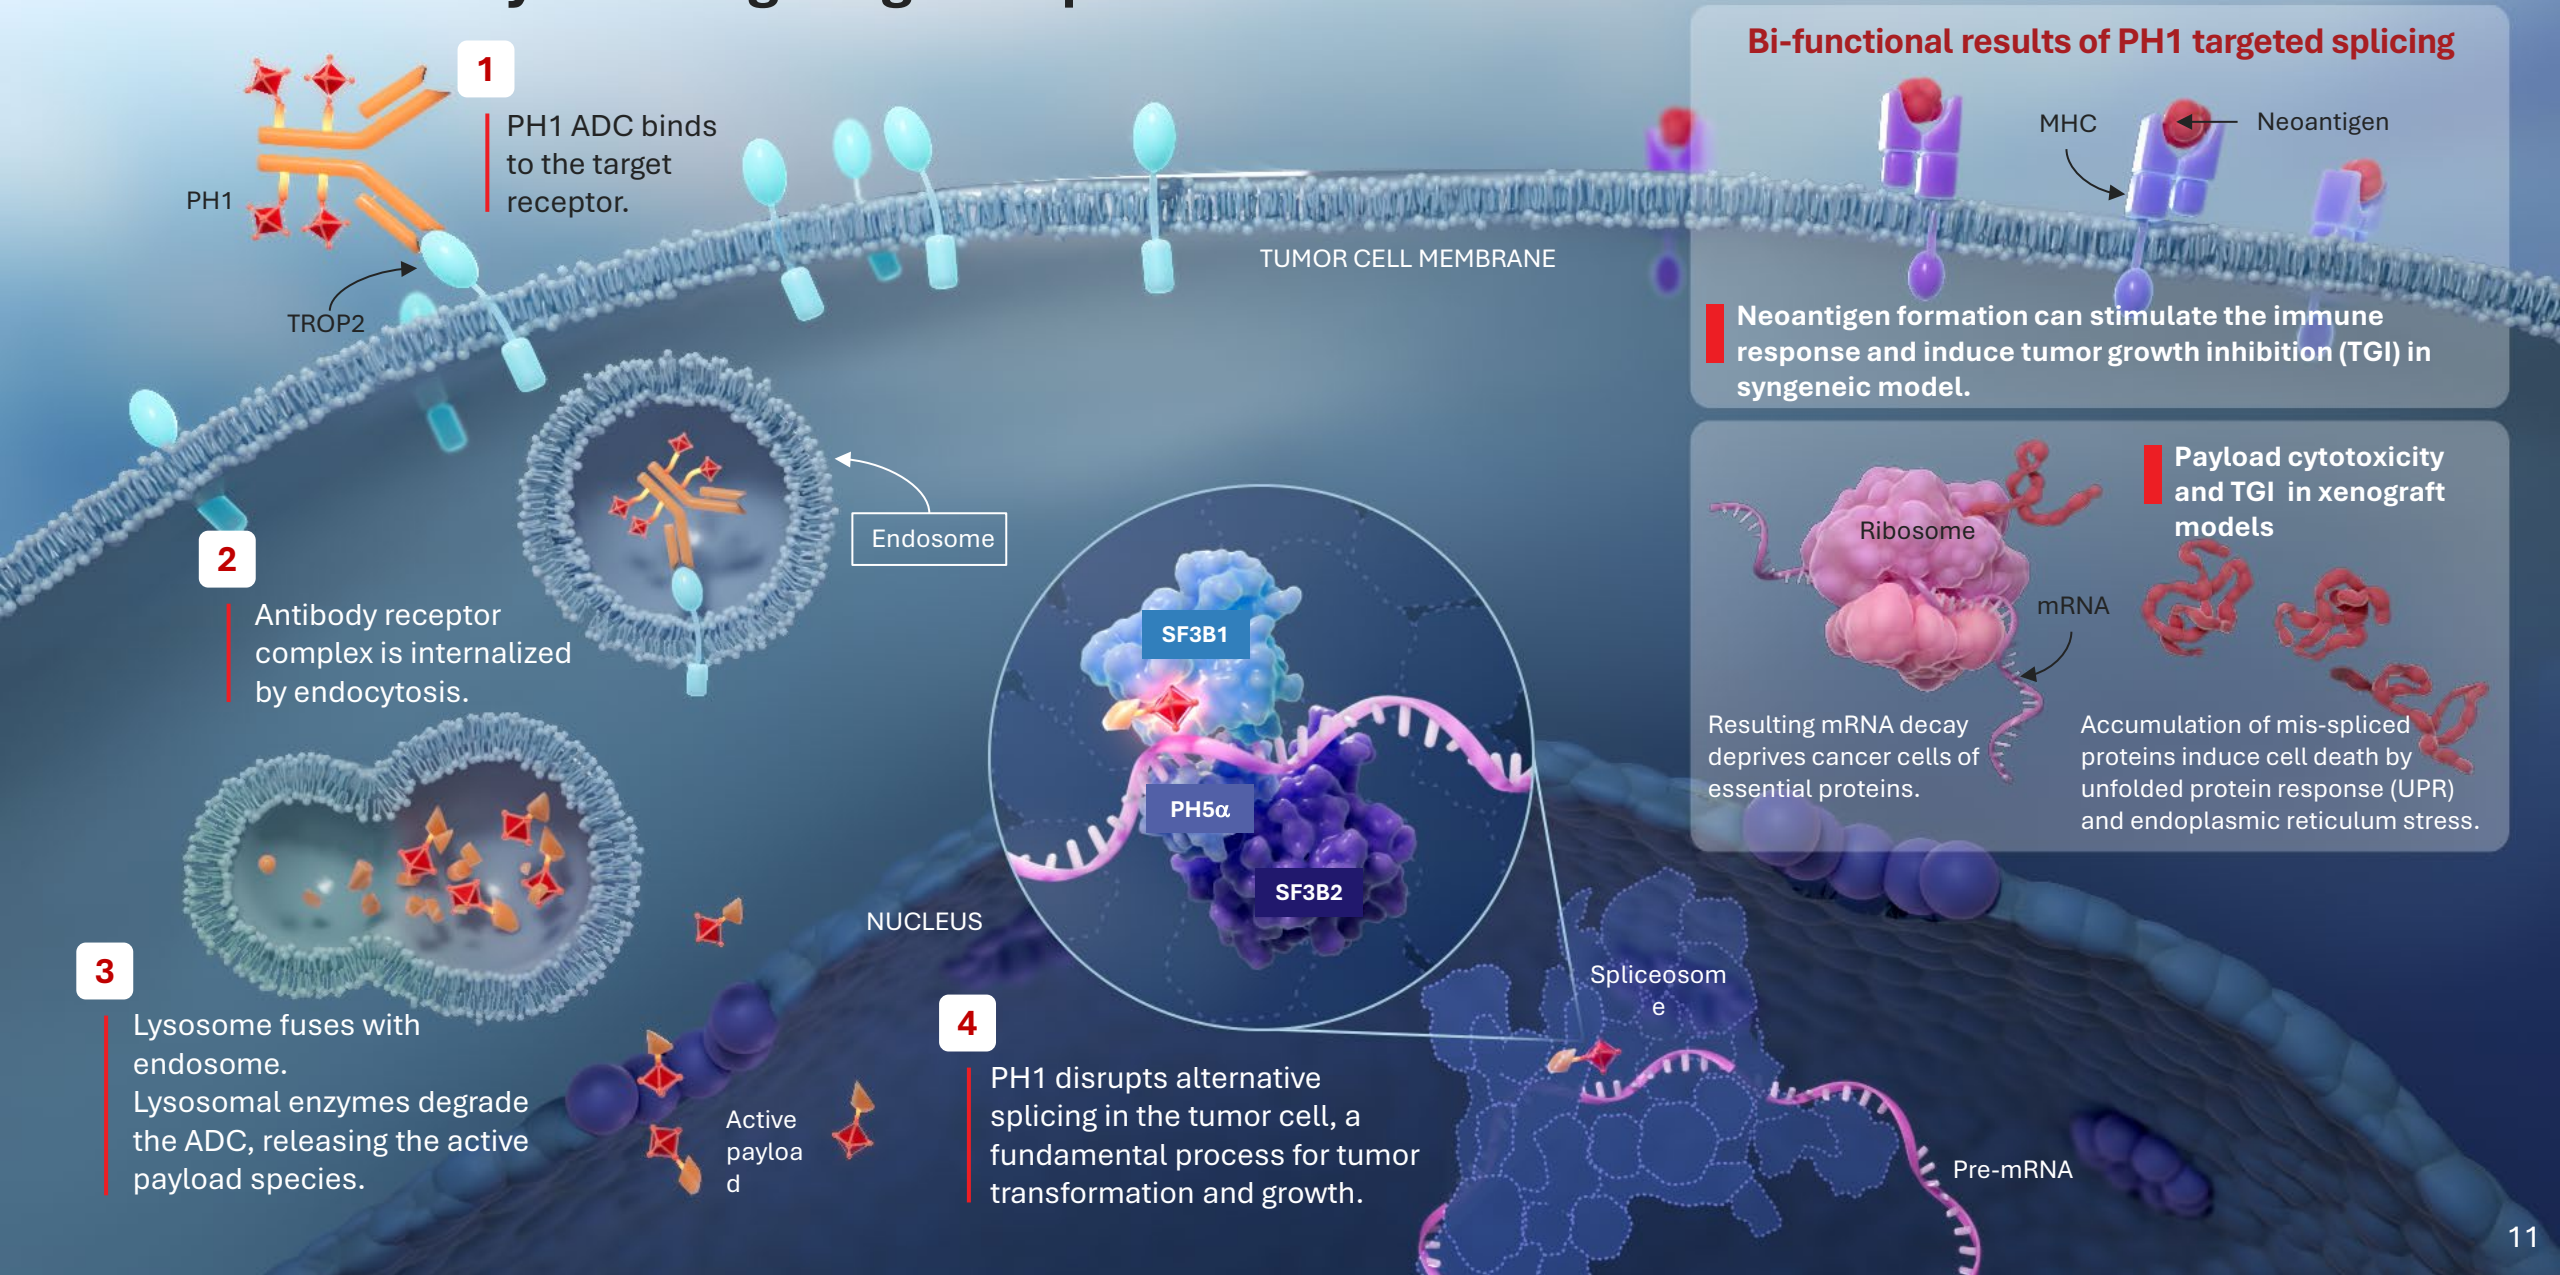

Appears to be a poor substrate for MDR transporters, which are often responsible for drug resistance in cancer therapy

Potential for Synergy With Immunotherapies

Immunomodulatory properties may synergize with checkpoint inhibitors and other immunotherapies

AKTX-101: Direct Tumor Cell Cytotoxicity and Generation of Neoantigens

Bi-Functional Payload Targeting the Spliceosome

AKTX-101:

Immune Response to Payload-Induced Neoantigens Extends Beyond ADC Target Receptor

Myeloid cells phagocytose and release granules

T cells recognize neoantigens and become primed for killing tumor cells

B cells recognize neoantigens and become primed for killing tumor cells

Synergy with **checkpoint inhibitor therapies** that further enhance immune response

Antibody response

MODERATELY IMMUNOGENIC CELL

TARGET^{LOW} EXPRESSING CELLS

- Some cell death directly from lower payload concentrations
- Some payload-induced neoepitopes
- Immune cell mediated death

HIGHLY IMMUNOGENIC CELL

TARGET CELL

- Active payload kills majority of target cells
- Stimulates payload-induced neoepitopes in survivors
- Resistant cells killed by immune response

WEAKLY IMMUNOGENIC CELL

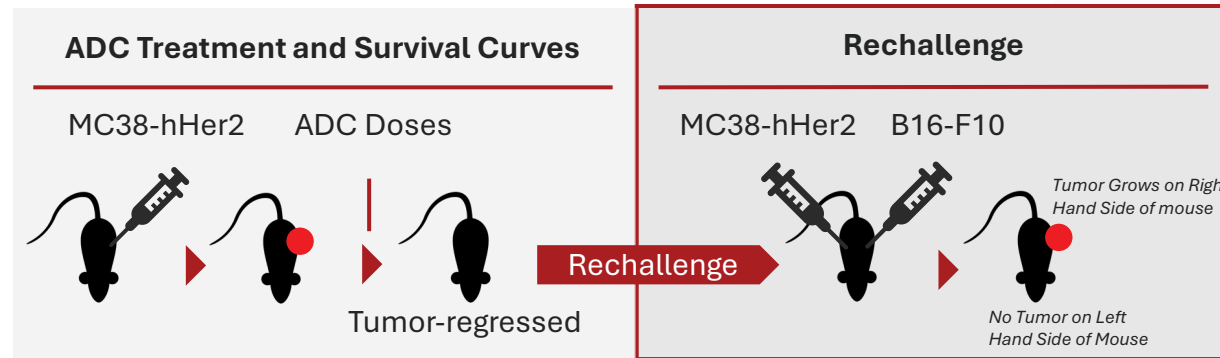

TARGET^{NONE} EXPRESSING CELLS

Immune response targets surrounding cancer cells without a chemical bystander effect

PH1 Payload Treated Mice Retained Immune Memory and Rejected Rechallenge with Tumor Cells

Potent Synergy With Checkpoint Inhibitor Has Potential to Cure Colorectal Tumors

PH1 Induced Tumor-Specific Immune Memory

AKTX-101: Novel Payload is a Spliceosome Inhibitor

With Multiple Anti-Tumor Mechanisms

Novel Anti-Cancer Payload That Disrupts RNA Splicing Within Cancer Cells, Inducing Tumor-Specific Cell Death While Generating Immunostimulatory Effects and Minimizing Off-Target Toxicity

Potential to Overcome Shortcomings of Current ADCs

Immunostimulatory Effects

Accumulation of mis-spliced proteins generates neoantigens that can be recognized by the immune system, potentially enhancing anti-tumor immunity

Overcomes Resistance Mechanisms

Appears to be a poor substrate for MDR transporters, which are often responsible for drug resistance in cancer therapy

Reduced Off-Target Toxicity

Proprietary linker and tumor selective antibodies that spare normal cells potentially reducing off-target toxicity

Potential for Synergy With Immunotherapies

Immunomodulatory properties may synergize with checkpoint inhibitors and other immunotherapies

AKTX-101: Demonstrated Reduced Off-Target Toxicity in Preclinical Study

Limited effect on Normal Human Fibroblasts, an example of off-target toxicity of Trodelvy®

Proprietary Linker Only Releases PH1 Payload Upon Cell Internalization – No Leakage

Suggests Potential for Higher Therapeutic Index

Normal Human Fibroblasts TROP2^{none}

No cytotoxicity against normal human fibroblasts as observed in FIC (Attributed to superior linker stability)

AKTX-101: Novel Payload is a Spliceosome Inhibitor

With Multiple Anti-Tumor Mechanisms

Novel Anti-Cancer Payload That Disrupts RNA Splicing Within Cancer Cells, Inducing Tumor-Specific Cell Death While Generating Immunostimulatory Effects and Minimizing Off-Target Toxicity

Potential to Overcome Shortcomings of Current ADCs

Immunostimulatory Effects

Accumulation of mis-spliced proteins generates neoantigens that can be recognized by the immune system, potentially enhancing anti-tumor immunity

Reduced Off-Target Toxicity

Proprietary linker and tumor selective antibodies that spare normal cells potentially reducing off-target toxicity

Overcomes Resistance Mechanisms

Appears to be a poor substrate for MDR transporters, which are often responsible for drug resistance in cancer therapy

Potential for Synergy With Immunotherapies

Immunomodulatory properties may synergize with checkpoint inhibitors and other immunotherapies

AKTX-101: Shown to Avoid Development of Resistance in Preclinical Study

PH1 Payload is Designed to Evade MDR Transporter Efflux Pumps and is unaffected by mutations in Tubulin or DNA Damage Pathways that confer resistance to microtubule and topoisomerase inhibitor payloads

Patients who develop resistance to current TROP2 ADCs, may still be candidates for AKTX-101 due to differentiated PH1 payload mechanism

Method: Normal MES-SA cells & MES-SA cells selected for overexpression of MDR transporter 1/2 exposed *in vitro* to PH1 or anti-tubulin payload MMAE (monomethyl auristatin E), in presence or absence of MDR 1/2 inhibitor elacridar

- MES-SA uterine sarcoma cell line
- MES-SA cells expressing high levels of MDR transporter 1 and 2 which can pump toxins out of cells
- ▲ MES-SA cells with high MDR expression + MDR inhibitor elacridar

PH1 potency unaffected by overexpression of multidrug resistance (MDR) transporters

200X higher MMAE concentration required to kill cells overexpressing MDRs; inhibition of MDR 1/2 by elacridar restores MMAE potency

AKTX-101: Novel Payload is a Spliceosome Inhibitor

With Multiple Anti-Tumor Mechanisms

Novel Anti-Cancer Payload That Disrupts RNA Splicing Within Cancer Cells, Inducing Tumor-Specific Cell Death While Generating Immunostimulatory Effects and Minimizing Off-Target Toxicity

Potential to Overcome Shortcomings of Current ADCs

Immunostimulatory Effects

Accumulation of mis-spliced proteins generates neoantigens that can be recognized by the immune system, potentially enhancing anti-tumor immunity

Reduced Off-Target Toxicity

Proprietary linker and tumor selective antibodies that spare normal cells potentially reducing off-target toxicity

Overcomes Resistance Mechanisms

Appears to be a poor substrate for MDR transporters, which are often responsible for drug resistance in cancer therapy

▶ Potential for Synergy With Immunotherapies

Immunomodulatory properties may synergize with checkpoint inhibitors and other immunotherapies

AKTX-101 Demonstrated Anti-Tumor Activity and Improved Overall Survival in Combination With Standard of Care I/O

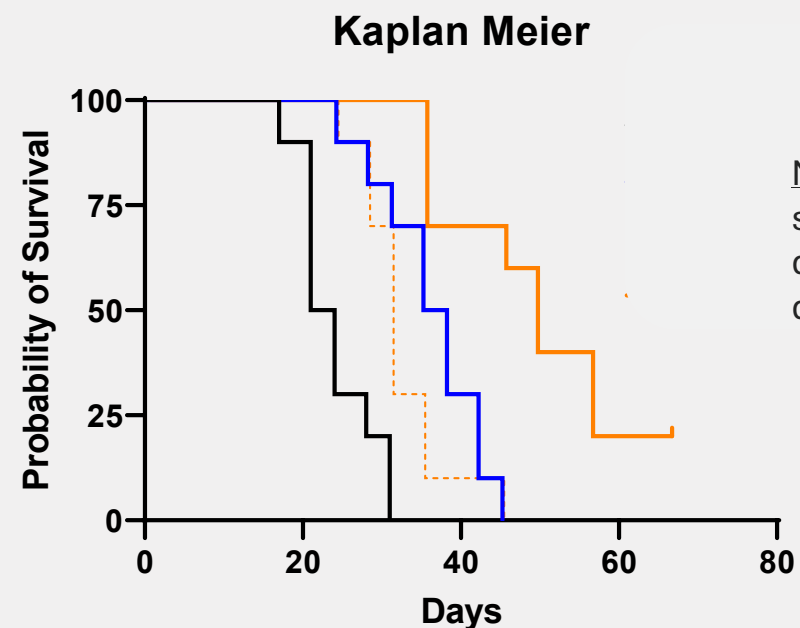

Mouse Bladder Syngeneic Cancer Tumor Model (Urothelial) Expressing Human TROP2 Protein

Superior Anti-Tumor Efficacy In Combination With IO

Comparable to SOC and Superior in Combination With I/O

Superior Overall Survival Combination With IO

Benefit in OS Compared to SOC and Superior in Combination With I/O

Significant Big Pharma Interest and Deal Flow in Early-Stage ADCs

Licensee	Licensor	Phase	Asset	Target	Date	Deal Type	Upfront Payment	Total Deal Highlights
 乐普生物 LEPU BIOPHARMA	 ARRIVENT	Preclinical	1 ADC	Undisclosed	1/2025	Licensing	\$47M	\$47M upfront + \$1.16B total milestones and royalties
 biohaven®	 Merus	Discovery	3 ADCs	Undisclosed	1/2025	Collaboration	Undisclosed	Research collaboration and license agreement to co-develop 3 ADCs
 宜联生物 MediLink Therapeutics	 zaiLab 再鼎医药	Preclinical	1 ADC	LRRC15	1/2025	Licensing	Undisclosed	Terms not disclosed
 BIOCYTOGEN	 Sotio MEMBER OF PPF GROUP	Preclinical	Multiple ADCs	Undisclosed	1/2025	Licensing	Undisclosed	Undisclosed upfront with up to \$325.5M in milestones and royalties on sales.
 Synaffix CONNECT TO CURE	 Mitsubishi Tanabe Pharma	Discovery	Undisclosed Research	Undisclosed	1/2025	Licensing	Undisclosed	Undisclosed upfront payment licensed.
 Synaffix CONNECT TO CURE	 Boehringer Ingelheim	Discovery	Undisclosed Research	Undisclosed	1/2025	Collaboration	Undisclosed	Undisclosed upfront with up to \$1.3B in milestones and royalty payments
 araris	 CHUGAI	Discovery	Undisclosed Research	Undisclosed	1/2025	Collaboration	Undisclosed	Undisclosed upfront with up to \$780M in milestones and royalty payments
 VelaVigo	 AVENZO THERAPEUTICS	Preclinical	VAC-103	EGFR x HER3	1/2025	Licensing	\$50M	\$50M upfront for rights outside of China, \$1.15B total deal potential + royalties.
 DualyBio 映恩生物	 AVENZO THERAPEUTICS	Preclinical	AVZO-1418/DB-1418	EGFR/HER3	1/2025	Licensing	\$50M	\$50 million and will be eligible to receive up to approximately \$1.15 billion in development, regulatory and commercial milestone payments
 WuXi Biologics Global Solution Provider	 AADI bioscience	Preclinical	3 ADCs	PTK7-ADC, MUC16-ADC, SEZ6-ADC	12/2024	Licensing	\$44M	\$44M upfront + \$265M in development and \$540M in commercial milestones, plus single-digit royalty (all 3 assets included)
 Synaffix CONNECT TO CURE	 ELEVATION ONCOLOGY	Preclinical	EO-1022	HER3	12/2024	Licensing	\$368M	\$368 million in upfront and clinical, regulatory, and commercial milestone payments, plus tiered royalties on net sales
 DualyBio 映恩生物	 GSK	Preclinical	DB-1324	Undisclosed	12/2024	Licensing	\$30M	\$30M upfront, plus pre-option milestones and up to \$975M in milestones and tiered royalties on sales
 TUBULIS	 GILEAD	Preclinical	Alco5 Tech	Undisclosed	12/2024	Licensing	\$20M	\$20M upfront, plus potential for \$30M option and up to \$415M in milestones and low double-digit royalties
 VelaVigo	 AVENZO THERAPEUTICS	Preclinical	VAC-103	Nectin4/ TROP2	11/2024	Option	\$50M	\$50 million and potential development, regulatory, and commercial milestone payments of up to approximately \$750 million in total, as well as tiered royalties on sales

Proven Management Team

Samir R. Patel, MD
Chief Executive Officer

Serial entrepreneur with more than 20 years of experience in life sciences with multiple successful exits

Torsten Hombeck, PhD
Chief Financial Officer

Seasoned executive with over 20 years of expertise in finance, capital markets and M&A

Miles Nunn, D. Phil
Chief Scientific Officer

Accomplished scientist and drug developer with over two decades of experience, including the discovery of nomacopan

Satyajit Mitra, PhD
Executive Director,
Head of Oncology

Scientist with 20 years in advancing novel oncology programs from early preclinical validation and lead selection through pipeline nomination

Highly Experienced, Involved, Knowledgeable Board to Help Steer Strategy and Execution

Hoyoung Huh, MD, PhD

Chairman

Founder of Peak Bio Inc. and has held positions of Chief Executive Officer and Board Chairman since founding pH Pharma in 2015

Samir R. Patel, MD

Chief Executive Officer

CEO since December of 2024, founder and principal of PranaBio Investments, has more than 20 years of experience in life sciences including co-founding Digital Therapeutics, LLC

Ray Prudo, MD

Director

Founder, Chairman, and CEO of Volution and its predecessor company, Varleigh Immuno Pharmaceuticals, and is currently a board member of several UK healthcare companies

James Neal, MS, MBA

Director

More than 25 years' experience in forming and maximizing business and technology collaborations globally and in bringing novel products and technologies to market

Sandip I. Patel JD, BBA

Director

Involved in the formation, development, growth, and successful exits of several companies in the healthcare services and technology sector, insurance, and financial services

Robert Bazemore

Director

Seasoned executive leader, board member and innovator with over 35 years experience in portfolio strategy, partnering, development and commercialization of novel therapeutics, predominantly in Oncology and Immunology

Abizer Gaslightwala

Director

25 years in the development and commercialization of novel medicines with extensive experience in Oncology; developed, launched, and driven growth of several oncology products and brands spanning cancers with a focus on targeted agents including HER2, VEGF, CD20, and EGFR

Upcoming Expected Value Driving Milestones

Building a Next-Generation Precision Bi-Functional ADC Platform

Ongoing and Near-Term

- Present anticipated PH1 Payload Preclinical Data at Scientific Conference
- Complete additional IND-enabling preclinical studies for AKTX-101
- Generate additional validating data on novel payloads to support pipeline
- Round out Executive Team with critical hires
- Seeking licensing/strategic partner for **AKTX-101 (TROP2 PH1 ADC)**

Legacy Pipeline Assets

Ongoing

BD Efforts To Secure Development Partners And Provide Non-Dilutive Capital

Assets Beyond ADC Platform

Opportunity for Non-Dilutive Capital Through Ongoing BD Activities to Secure Development Partner for Inactive Programs

Program	Indication	Discovery	Preclinical	Phase 1	Phase 2	Phase 3	Global Market Opportunity
PAS-Nomacopan <i>Long-Acting Complement C5 & Leukotriene B4 Inhibitor for Eye</i>	Geographic Atrophy						\$23 Billion ¹
	Alpha-1 Antitrypsin Deficiency						\$1.4 Billion ²
PHP-303 <i>Neutrophil Elastase Inhibitor</i>	Acute Respiratory Distress Syndrome						\$3.4 Billion ³
	Bullous Pemphigoid; Paroxysmal Nocturnal Hemoglobinuria						>\$5 Billion ⁴
Nomacopan <i>Complement C5 & Leukotriene B4 Inhibitor for Systemic Conditions</i>	Trauma						\$15 Billion ⁵

Why Now

Next-Generation Precision Antibody Drug Conjugates (ADC) Candidates for the Treatment of Cancer

Innovative Bi-Functional ADC Platform Technology

Customizable Targets by Tumor, Novel Payloads, Unique Linkers to Generate a Pipeline of Superior ADCs for Out-Licensing Opportunities

AKTX-101 (TROP2 PH1 ADC)

Next-Generation Precision Bi-Functional ADC With Novel Spliceosome Inhibiting Payload Designed to Overcome Limitations of Current ADCs

Significant Deal-Flow for Early-Stage ADC

Continued Recent Momentum of ADC Deals Underscores Big Pharma Growing Interest and Engagement for Potential Deal

Capital Efficient Strategy
Focused on Execution

Ongoing Robust BD Effort to Secure Licensing/Strategic Partner for AKTX-101 and Potential for Upside From Licensing of Non-Core Assets
